

This guide was made using a 3g iPod Touch. Later iPods, iPhones and iPads will work in a very similar way. Radyo is the free version of [Radio](#), a paid app on the App Store. The free version contains all the features you require to listen, but it does have adverts.

1. Install Radyo

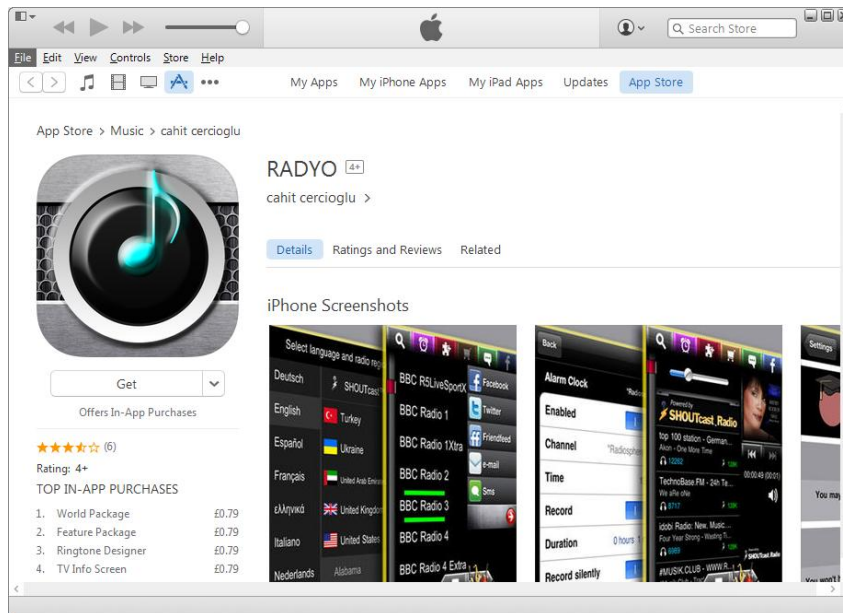

You can find it in the App Store on your device by searching for "Radyo" or viewing it in iTunes [here](#).

The screenshot shows the iTunes Preview page for the RADYO app. The browser address bar shows the URL: itunes.apple.com/gb/app/radyo/id369889183. The page header includes navigation links for Store, Mac, iPhone, Watch, iPad, iPod, iTunes, and Support. The main content area features the app's title "RADYO" by "cahit cercioglu" and a "View More by This Developer" link. Below this is a description of the app, a "Description" section, and a "What's New in Version 5.7.10" section. The app is listed as "Free" and "Updated: 13 November 2014".

2. Launch the app.

By pressing on the "GET" button under the Icon

The screenshot shows the App Store interface on a Mac. The "RADYO" app by "cahit cercioglu" is displayed. The app icon is a black circle with a white musical note. The "Get" button is visible below the icon. The page also shows "iPhone Screenshots" and "TOP IN-APP PURCHASES".

Apple will ask you for an AppleID and Password

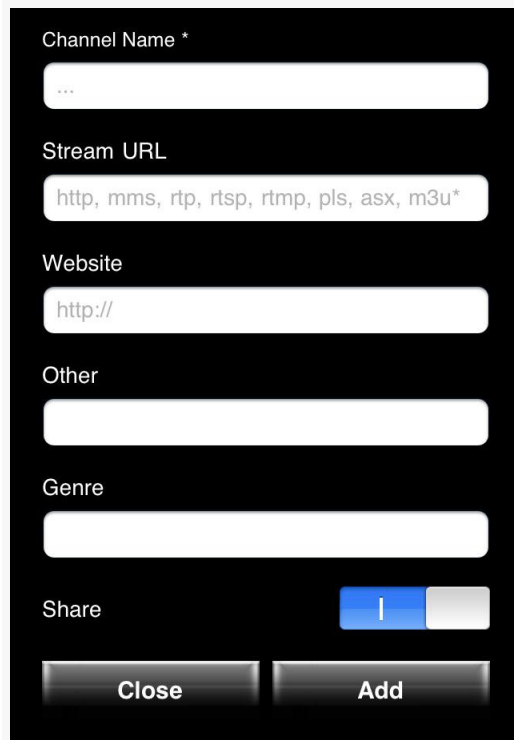

3. Tab the + Puzzle icon Button

4. Enter your Steam Details

The Station Name and Description fields are for your record only, they don't need to match the server's actual details. Your Station URL should be the hostname and port only, do not include the protocol (i.e. http://).

5. Tap the Add button and your station will be listed on the Streams page

7. Tap the hollow hart to add your station to your favorites

9. Radyo intergrates with the iPod IPad iPhone music player

You can continue to listen with Radyo in the background and use your iPod controls to pause the stream.
